

DIVESHOP

Strictly For **The Birds**

BELLA IS the name given to Scubapro's new buoyancy compensator designed, fashioned and perfected exclusively for women. The BC jacket is not only coloured and cut with a woman's shape and style in mind - there is plenty more to entice you!

Bella is a front adjustable buoyancy compensator developed around a brand new and Scubapro exclusive wrap-around air bladder, unlike traditional bladders that extend out and away from the torso when inflated, Bella's new full-wrap bladder retains its 360° cradle-like shape even when fully inflated. The result is a BC which 'hugs' the diver throughout the full range of inflation, assuring optimal comfort and total control in all diving environments.

In addition to the wrap around technology, comfort pads have been integrated into the interior of both shoulder straps and luxuriously cushion the equipment load on a woman's body, especially appreciated when gearing up to dive. The shoulder pads are made from Monprene®, a remarkable compound known for its soft, tactile feel and

ability to absorb weight compression.

Other features worth noting are the patterns and panels which have been formed for a woman's body shape, including contoured hip indents, front adjustable design for freedom of movement and easy adaptability to all body types plus rotating quick-release shoulder buckles for convenience and comfort. A soft neoprene neck and richly padded backpack are on hand for optimal comfort and a fully adjustable cummerbund in women's proportions will ensure proper fit. There is a 3-dump deflation system for enhanced buoyancy control in various diving positions plus zippered cargo pockets and convenient D-rings because accessories are always a woman's necessity - even under water.

Scubapro have clearly recognised that female divers make up a fast-growing diving community and deserve gear tailored expressly for them. If you would like to know more about the Bella BC then visit: www.scubapro.com/ The Bella is available in five female tailored sizes from XS to XL. RRP: £359.00

Housing Development From **Greenaway**

GREENAWAY MARINE is pleased to announce the completion of a Seapro SP7A Housing for the latest Sony Broadcast Quality Camera the HVR Z1.

The Housing boasts a 4" TFT monitor for full 'through the lens' viewing and the optolite port which puts everything into focus. Addition mounting points for lamps and accessories completes the outfit.

For further details please visit www.greenawaymarine.com

Paper That's **Tough**

TOUGHPRINT LOOKS and feels like normal paper, you can write on it and even print on it using standard ink-jet or laser printers. However, what makes it different from regular paper is that it is completely waterproof which means no colour running, bleeding or smudging added to this it is tear resistant even when wet.

Toughprint is useful for anyone participating in water related activities such as diving

where it would be particularly useful for boating/sailing charts, maps, boat/student roll-call sheets, navigation aids, fish ID charts, run-time slates, marine-archaeology recording, site plotting and so much more.

Toughprint recommended that you use the laser print version for optimum underwater use. It costs £14.95 for a pack of 25 A4 sheets, Laser or Inkjet and is available online from memory-map.co.uk.
